

Unit 3: Z- Chapter 6

After obtaining my nursing degree I plan on going further in my education. I would first like to complete my Bachelor of Science in Nursing. I would like to get this degree on top of my regular nursing degree in case I would decide to work at bigger hospitals that require this level of education. I am still undecided if I would like to go get my master's and eventually go for my CRNA. To obtain my CRNA I would have to work a minimum of one year in the ICU before applying for school.

This would be a good choice as my goal is to eventually end up in the ICU. I have really liked the ICU environment and the action that comes with helping critically ill patients. Obtaining my CRNA degree would allow me to also know how to monitor patients under anesthesia during and after surgeries.
