

Firelands Regional Medical Center School of Nursing

AMSN- 2024

Unit 5: Z- Chapter 5
Online Assignment (1H)

List three key points you learned from the NCL video.

- 1) A multistate license allows a nurse to readily practice in any state.
- 2) There are no delays in care or notification requirements before taking an assignment in any state.
- 3) It allows for a benefit of expanding their professional licensure and provide good healthcare to the public in Ohio.

1. How can having MSL in Ohio positively impact the nursing shortage at Firelands?

It allows nurses from other states take an assignment in Ohio without the need for obtaining a new license, which will help provide quality patient care in a more timely manner.

2. In your own words, explain the difference between “CE” and “Category A CE”.

CE is a learning experience that builds on before a license or certification program, allowing for them to improve their knowledge.

Category A CE is related to the Ohio Nurse Practice Act, as it has to be approved by the board of nursing.

3. After an RN’s initial renewal, how many CE’s have to be completed during the 2-year license cycle?

After the initial renewal, you have to complete 24 contact hours during the 2-year license cycle.

- b. Answer the following question:

1. Pick one of the Rules (A-K) and explain the importance of this rule to patient safety and positive patient outcomes. This must be in your own words and at least 100 words.

E: This rule is very significant in making sure positive patient outcomes take place. This rule explains how any order should be implemented in a timely manner unless they believe it is an inaccurate, not authorized, not valid, harmful, or a contraindicated order. Along with this it is very important to clarify the order when the suspicion takes place, so they physician is aware of the potential mistake. It Is very important to question the order instead of just making sure the order is implemented. Mistakes can happen and it is our responsibility to make sure proper interventions take place for the patient, and to prevent any potential harm to the patient.
