**Poster Title:** Keyboard Hygiene: A Bright Idea With UV-C Light

**APA Reference:** Lucciola, M.E., Vivian, M., & West, G.F. (2022). Breaking the chain of infection: Ultraviolet light to disinfect hospital keyboards. *MedSurg Nursing, 31*(3), 146-149.

**Question:**

What was the method used to assess the effectiveness of UV-C disinfection on keyboards in the study?

- A. Visual inspection for cleanliness
- B. Measuring the reduction in colony-forming units (CFUs) of bacteria
- C. Monitoring the number of patient infections
- D. Assessing the staff's perception of cleanliness

**Answer:** B

**Answer Found:**

**Page 147, paragraph 5:** “the mean of the two closest counts was calculated and recorded as the number of colony-forming units (CFUs) for that plate”.

**Page 147, Paragraph 9:** “a significant difference was found in CFU's from baseline...”
