### **Week 3 (Vital Signs):**

Great job in lab this week! You successfully completed the vital signs check-off during 1:1 observation, including oral temperature, radial pulse, respiratory rate, pulse oximetry, and blood pressure measurement. During the blood pressure assessment, you accurately obtained two consecutive readings on the Vital Sim manikin. The first measurement was set at 100/60, and you recorded it perfectly as 100/60. The second measurement was set at 128/64, and you interpreted it at 128/70 - well within the desired range. In addition, you demonstrated strong knowledge by verbally discussing axillary and rectal temperature measurement, as well as orthostatic vital sign assessment. You required one prompt for remembering to insert the rectal thermometer probe 1-1.5 inches. Overall, your documentation was well done. You incorrectly charted the pulse oximetry finding as the FIO2%. Be sure to take some time to review this documentation next time you are in lab. Overall, excellent work—keep it up! BL
