

<p><b>Objective # 6a:</b> Implement patient-centered plans of care utilizing the nursing process and clinical judgment. (2,3,4,5)*</p>	<p><b>Students Name:</b> Teila Hay</p> <p><b>Date:</b> 1/23/19 2<sup>nd</sup> attempt: 1/30/19</p>
<p><b>**Nursing care plan not appropriate to patient situation = 0 and automatic unsatisfactory rating</b></p>	<p><b>Nursing Diagnosis:</b> <b>Ineffective Airway Clearance r/t excessive mucous, thick sputum</b></p>
<p>Nursing Diagnosis: (3 points total)          Problem Statement (1) 1 1          Etiology (1) 1 1          Defining Characteristics (1) 0 1</p>	<p>Total Points 2/3          Comments: Great job selecting a priority diagnosis for your patient with RSV and pneumonia. Your problem statement is NANDA approved and there is no medical diagnosis in the etiology.</p> <ul style="list-style-type: none"> <li>• Not all pertinent defining characteristics were listed. Think about your related to of excessive mucous and thick sputum when determining your defining characteristics.</li> <li>• Was she short of breath at rest? Or with exertion?</li> <li>• Was her respiratory rate or Spo2 completely within normal limits?</li> <li>• Be more specific with where her wheezing and crackles were noted upon auscultation. Ex: right lobe/left lobe, upper/lower, anterior/posterior, inspiration/expiration.</li> <li>• Think about your respiratory assessment and questions that you may ask? How was your patient's cough? Was it productive? Moist? Etc.</li> </ul> <p>Great job taking into consideration the feedback provided. Your defining characteristics are specific and individualized to your patient. You met the necessary criteria to receive full credit in the Nursing Diagnosis section. NS</p>
<p>Goal and Outcome (6 points total)          Goal Statement (1) 1 1          Outcome:          Specific (1) 0 1          Measurable (1) 1 1          Attainable (1) 1 1          Realistic (1) 1 1          Time Frame (1) 1 1</p>	<p>Total Points 5/6          Comments: Your generalized goal is a positive statement that directly relates to the NANDA problem. Your listed outcomes are SMART (specific, measurable, attainable, realistic, timeframe). However, there are some key goals that have been left out specific to your patient. Think about what your nursing diagnosis is and what it is related to. What would our outcomes be to ensure that the patient's airway is clear? If your patient has excessive mucous and thick secretions, what outcomes are we looking for to ensure effective airway clearance? Try to include some more detail from your respiratory assessment.</p> <p>Your defining characteristics for your outcomes are specific. Great job with this section of the care plan. NS</p>
<p>Nursing Interventions: (8 points total)          Prioritized (1) 0 1          What (1) 1 1          How Often (1) 0 0          When (1) 0 1          Individualized (1) 0 1          Realistic (1) 1 1          Rationale (1) 1 1          All pertinent interventions listed (1) 0 0</p>	<p>Total Points 3/6          Comments:</p> <ul style="list-style-type: none"> <li>• Remember to prioritize your interventions with all assessment taking highest priority.</li> <li>• Interventions that will help the problem should come after all assessment interventions</li> <li>• Not all interventions included how often they would be completed. Include how often each intervention would be performed, including education interventions.</li> <li>• Make sure to include when each intervention would be performed as well. Ex (0800, 1200, etc).</li> <li>• When listing interventions, make sure they are individualized for your patient. Medications should include the name, dose and frequency specific to your patient's plan of care.</li> <li>• Not all pertinent interventions were listed. How can we assess the patient's ability to clear secretions? How do we know if she still has excessive mucous or thick secretions? Since your care plan is based on ineffective airway clearance, you need to include interventions related to her sputum. What lab/microbiology and diagnostic tests would we be monitoring? What other nursing interventions can we perform or encourage that can help thin secretions? What were some of the interventions your patient was doing to thin her secretions?</li> </ul> <p>Your interventions were prioritized appropriately. Most of your interventions included what the intervention was, how often the interventions would be performed, and when. Include how often you would collect a sputum sample. The interventions were individualized for your patient that you</p>

	<p>cared for. There are still some pertinent interventions that were not included. Include interventions that pertain to your cough and sputum outcomes. An intervention should be included to assess each desired outcome and improve each desired outcome. Overall good job! NS</p>
<p>Evaluation: (5 points total)  Date (1) 0 1  Goal Met/partially/unmet (1) 1 1  Defining characteristics (1) 1 1  Plan to continue/terminate (1) 1 1  Signature (1) 1 1</p>	<p>Total Points 4/5  Comments: Overall good job with your evaluation section. Be sure to include the date of when you are evaluating your outcomes.</p> <ul style="list-style-type: none"> <li>• You identified that your goal was partially met.</li> <li>• You included your assessment of the patient as it related to each piece of the outcome.</li> <li>• You determined that you should continue your plan of care.</li> <li>• You provided an appropriate signature.</li> </ul> <p>Great job evaluating your care plan appropriately! NS</p>
<p>Total possible points = 22  18-22 = Satisfactory care plan  17-14 = Needs improvement care plan  ≤ 13 = Unsatisfactory care plan</p>	<p>Total Points for entire care plan = 15/22  Total Points for second attempt = 20/22</p> <p>Comments: Overall, good job with your first care plan. Since you did not receive enough points for a satisfactory care plan, you will need to revise and re-submit. Be sure to review the comments provided in addition to the care plan grading rubric and the nursing care plan guidelines provided in the course resources on edvance360. The care plan guidelines will provide all the details that faculty are looking for when grading. If you have any questions or concerns please don't hesitate to ask! NS</p> <p>You are satisfactory for your first care plan submission in this course. Remember you must achieve a satisfactory rating in one more care plan before then end of the semester. Keep up the hard work! NS</p>
