Student Developed Simulation Scenario Storyboard	
Identified Problem/Scenario Topic and Related Resources: Glomerulonephritis from streptococcus infection Linnard-Palmer/Coats chapter 37 Child with a genitourinary condition pages 620-629	**Desired Overall Goal:** 1. **Recognize signs of Glomerulonephritis** 2. Identify the cause of Glomerulonephritis 3. Intervene appropriately 4. **Effective administration of medication**
Case Summary: 7-year-old comes in with a positive strep throat test within the past 10 days. Patient is fatigue. Parents noticed a rash on the buttocks and legs	**Expected Interventions of Students:** 1. **Receive bedside report** 2. Baseline weight 3. Pain assessment 4. **Vital signs** 5. **Get UA and CBC** 6. **Assess urine** 7. Renal ultrasound 8. Administer diuretics 9. Treat strep with antibiotic 10. **Teach family about strep and early treatment of**

Case Flow (15-20 Minute Simulation Time)		
Initiation of Scenario: 1. Patient in hand off report had strep within 10 days. 2. Reports low levels of urine that is dark brown in color	**First Frame:** 1. Nurse introduce self 2. Weight check 3. Begin assessment (vital signs and head to toe) 4. Check rash on buttocks and legs 5. Renal ultrasound	➡
