

Write one nursing diagnosis for the client's priority **Axis III** medical disorder, include defining characteristics.

Chronic pain r/t physical disability aeb

- verbal report of pain
- altered ability to continue activity
- changes in sleep pattern

(use NANDA approved diagnosis)

Collaboration: Consult with at least one staff member about this client.
Answer the questions.

1. I spoke with: Laura, whose role is: RN.

2. What two interventions are in place that will help this client succeed in their individual treatment plan? List those interventions.

Do you agree or disagree with those interventions? Provide an explanation for your answer.

- Explore methods of dealing with depression daily when frustrated
- Allow pt to ventilate feelings + give concerns 1:1, if they feel like they want to talk

I think these are 2 very good interventions. Nothing more therapeutic than having someone listen and act engaged in what you're saying.
