

Medication Worksheet N321

Name _____

Date _____

1. How many mL are in a teaspoon? _____
2. 750 mcg is how many mg? _____
3. Express number to the nearest hundredth 2.345 _____
4. Solve the following equation 55×0.15 . Express your answer to the nearest tenth _____
5. 2.5 L is how many mL? _____
6. 750 mg is how many grams? _____
7. Convert weights to kg:
 - a. 154 lbs. _____
 - b. 123 lbs. _____
 - c. 15.4 lbs. _____
8. 45 min = how many hours? _____
9. The nurse needs to infuse 250 mL over 45 minutes by infusion pump. At what rate per hour does the nurse set the pump? _____
10. The provider has ordered 1 L of 0.9NS over 12 hours. At what rate per hour does the nurse set the pump? _____

11. Your patient was ordered 28 units regular insulin, and 64 units NPH insulin. In all how many units of insulin will the nurse administer?

12. An IV medication of 250 mL is started at 0750 to run at 33 gtts/min using 10 gtts/mL. How long will the infusion run? _____

13. Calculate IV flow rate for 1200 mL to be infused in six hours. Using tubing with drip factor of 20 gtts/mL. _____

14. The patient is ordered Tylenol elixir at 325 mg per teaspoon. How many mL would the nurse administer? _____

15. The provider orders 2mg Dilaudid IVP and you have on hand 4mg per 2 mL. How many mL will you give? _____

16. The nurse hangs 1 L of 0.9NS at 9 am @ 125 mL/hr what time will the IV be finished? (Military time) _____

17. What is 2pm in Military time? _____

18. What is 6 am in military time? _____

Blood glucose (mg/dL)	Insulin (units)
61-150	0
151-200	3
201-250	5
251-300	8
301-350	10
351-400	12
>400	15 ^a

19. ^aPhysician should be contacted. According to this chart how much insulin would you give a patient with a blood glucose of 275? _____
20. J. Smith weighs 205 lb. The doctor orders 15 mg/kg of medication. Convert the patient's weight into kilograms. Mr. Smith weighs _____ kg. What is the correct dose of medication for Mr. Smith? _____ mg.
21. Doctor's order says: 300 mL of Normal Saline to infuse over 6 hours. What is the hourly rate? _____
22. Doctor's order says: 300 mL of Packed Red Blood Cells to infuse over 4 hours. What is the hourly rate? _____
23. Doctor's order says: 250 mL of Vancomycin to infuse over 45 minutes. What is the hourly rate? _____
24. Doctor's order says: 2,500 mL of D5 1/4 Normal Saline to infuse over 1 day. What is the hourly rate? _____

25. Doctor's order says: 1000 mL of TPN to infuse over 36 hours. What is the hourly rate? _____

26. Doctor's order says: "Infuse 1500 mL of Lactated Ringer's over 12 hours."
Drip factor: 15 gtt/mL? Calculate IV flow
rate _____

27. Doctor's order says: "0.4 L of D5W in Normal Saline to infuse over 3
hours." Drip factor: 10 gtt/mL. Calculate IV flow
Rate _____

28. Doctor's order says: "500 mL of D5 1/2 Normal Saline with 10 meq of
potassium chloride to infuse over 5 hours " Drip factor: 10 gtt/mL
Calculate IV flow Rate _____

29. Doctor's order says: "3 L of D5W with 20 meq of potassium chloride to
infuse over 24 hours" Drip factor: 10 gtt/mL. Calculate IV flow rate

30. Provider order an IM injection of 250mg and you have 500mg per 10 mL.
How many mL will the nurse draw up into the syringe? _____
