

N321 Adult Health 1

Clinical Reflection Form

Name; Olamide Adewole

Clinical Rotation Site; Emergency Department

1. Briefly write about today's experience; It was my first time in the emergency department, going in I was anxious because I thought it was going to be scary, but while I was talking to the nurses they made realize that being in the ED, would increase my critical thinking skills, and it was also help me think fast on my feet. But overall, it was fun and I cannot wait for my next ED rotation.
2. What is one thing you learned? "If you order one EKG, you should always order another one", and I also learned how a cat scan worked.
3. What is one thing you would do differently? Nothing
4. What is your major take home from today's clinical experiences? The importance of knowing lab values, because it helps to determine the least and most concentration of electrolytes that can go in each bag of IV's.
5. Is there anything else you would like to mention? No
