**Your ScoreCard: Correct: 39/48 Incorrect: 9/48**

- The movement of a drug from the site of administration to various tissues of the body is what kind of pharmacokinetic action?  
Absorption
- What is the term given to the altered version of a drug after biotransformation occurs?  
Metabolite
- What form of oral drug is expected to have the longest absorption rate?  
Tablets that have an enteric coating
- What is the name of the process that occurs when a drug changes a target molecule's typical response by inhibiting or enhancing the action of an enzyme that affects the target molecule?  
Selective interaction
- What is the term for the unintended effects of a drug that commonly occur when a therapeutic dose of the drug is given?  
Side effects
- What is the term for the drug effect that occurs when the amount of drug given is greater than the rate at which it is being excreted?  
Cumulative drug effect
- What is the pregnancy safety category for a medication that poses a significant risk to the fetus?  
Category X
- At what age in children does the rate of drug metabolism reach that of an adult?  
12 years old
- What are some methods by which patient knowledge is evaluated after patient instructions have been given?
  - Ask drug-related questions.
  - Ask patient to repeat information given.
  - Require a return demonstration when administration of the drug requires a special technique.
