

The document wouldn't let me type in the Collaborative Care: Nursing section, so I typed it up here.

Priority Nursing Interventions and Rationales.

Safety: Needs one-one or 15-minute checks, remove objects that the patient could use for harm.

Don't get backed into the room.

Outcome: Patient and others remains safe.

Assess risk for suicide: Continue to monitor.

Outcome: Patient remains safe.

Manage symptoms: Provide medications, therapy.

Outcome: Patient's symptoms continue to improve.
