

N431 Adult Health II

Clinical Reflection Form

Name: Junmian Zhao

Date:6/8/2021

Clinical Rotation Site: Surgical department

1. Briefly write about today's experience(s)

I had an excellent experience in the surgical department today. I had watched a D & C procedure for a 52-year-old female who is postmenopausal. And an LAVH procedure for a 35-year-old female. In the end, I watched a bone biopsy procedure.

2. What is one thing you learned?

Safety is the priority, which is I learned again. Do not leave the patient alone on the surgery table when taking the belt off the patient post-procedure because the patient is still drowsy due to the anesthesia therapy.

3. What is one thing you would do differently?

Be aware of where the sterile field is located. Do not try to help because I could break the sterile field, and the others have to start it over.

4. What is your major "take home" from today's clinical experience(s)?

Nursing actions I have observed in the OR are my major "take home", checking the patient, and use an aseptic technique to prepare the patient. Intra-procedure, they assist the physician, watch the patient's status.

5. Is there anything else you would like to mention?

The surgical department is excellent. They show us everything they think we need to learn. I appreciate the opportunity.
