

N311 Care Plan #1

Lakeview College of Nursing

Camryn Studer

### Demographics (5 points)

<b>Date of Admission</b> 1/21/2021	<b>Patient Initials</b> L. C.	<b>Age</b> 99	<b>Gender</b> F
<b>Race/Ethnicity</b> Caucasian	<b>Occupation</b> Retired	<b>Marital Status</b> Widow	<b>Allergies</b> No known allergies
<b>Code Status</b> DNR	<b>Height</b> 63 in	<b>Weight</b> 125.1 lbs	

### Medical History (5 Points)

- Past Medical History:**
- Aortic stenosis
  - Chronic back pain
  - Fracture of femur, left humerus, and left wrist
  - Hypertension
  - Mild renal Insufficiency
  - Osteoporosis
  - Squamous cell skin cancer
- Past Surgical History:**
- ORIF of left hip 4/25/2017
  - ORIF left wrist 4/25/2017
  - Hysterectomy
  - Hemorrhoidectomy
- Family History:** -N/A
- Social History (tobacco/alcohol/drugs):** -N/A

### Admission Assessment

**Chief Complaint (2 points):** Patient fell, sustaining a minor head injury with no loss of consciousness. Complains of Hip pain on the right side of her body.

**History of present Illness (10 points):** The patient was standing in her kitchen and lost balance as she was turning around. She fell onto her right side and is now complaining of right hip pain. Patient states, “It is a constant, sharp pain, that worsens with movement or touching the area.” Pt also hit the back of her head but denies LOC and refused medication and IV access pre-hospital.

### **Primary Diagnosis**

**Primary Diagnosis on Admission (3 points):** Nonrheumatic aortic valve stenosis

**Secondary Diagnosis (if applicable):** N/A

### **Pathophysiology of the Disease, APA format (20 points):**

“Aortic valve stenosis occurs when the heart's aortic valve narrows. The valve doesn't open fully, which reduces or blocks blood flow from your heart into the main artery to your body (aorta) and to the rest of your body” (Mayo Clinic, 2021). The four valves in your heart keep blood flowing in the right way. The mitral valve, tricuspid valve, pulmonary valve, and aortic valve are among these valves. During each heartbeat, flaps (cusps or leaflets) open and close on each valve. The valves don't always open or close properly. Blood flow is slowed or obstructed when a valve does not fully open or close.

The aortic valve between the lower left heart chamber (left ventricle) and the aorta does not open completely in aortic valve stenosis. The passageway for blood from the heart to the aorta is narrowed (stenosis).

Your heart has to work harder to pump enough blood into the aorta and the rest of your body when the aortic valve opening is narrowed. The left ventricle can thicken and grow as a result of the heart's additional work. The tension can

eventually weaken the heart muscle, which can lead to cardiac failure and other catastrophic complications.

Common signs and symptoms are: Abnormal heart sound (heart murmur) heard through a stethoscope

- Chest pain (angina) or tightness with activity
- Feeling faint or dizzy or fainting with activity
- Shortness of breath, especially when you have been active
- Fatigue, especially during times of increased activity
- Rapid, fluttering heartbeat (palpitations)
- Not eating enough (mainly in children with aortic valve stenosis)
- Not gaining enough weight (mainly in children with aortic valve stenosis)

Pt has history of hypertension, mild renal insufficiency, and age all relate back to nonrheumatic aortic valve stenosis.

#### Diagnostic Imaging

**All Other Diagnostic Tests (10 points):** EKG normal sinus rhythm, Heart rate 71, no acute ST segment elevation/depression. Portable chest X-ray negative with no signs or obvious infiltrate. CT on brain; no acute disease and CT on right hip.

**Current Medications (10 points, 2 points per completed med)  
\*5 different medications must be completed\***

**Medications (5 required)**

<b>Brand/Generic</b>	<b>Lopressor (Metoprolol)</b>	<b>Norco</b>	<b>Calcium + D tab (Calcium carbonate)</b>
<b>Dose</b>	<b>50 mg</b>	<b>5-325 mg</b>	<b>600/400 mg</b>
<b>Frequency</b>	<b>BID</b>	<b>Q 6 hrs PRN</b>	<b>Once every morning</b>
<b>Route</b>	<b>Oral</b>	<b>Oral</b>	<b>Oral</b>
<b>Classification</b>	<b>Ther. Class: Antianginals, Antihypertensives Pharm. Class: Beta blockers</b>	<b>Ther. Class: Opioid analgesics Pharm. Class: Opioid agonists nonopioid analgesic combo.</b>	<b>Ther. Class: Mineral and electrolyte replacement/supplement s</b>
<b>Mechanism of Action</b>	<b>Blocks stimulation of beta1 receptors but does not usually affect beta2 receptor sites.</b> <ul style="list-style-type: none"> <li>○ Decreases BP and HR</li> <li>○ Decreases frequency of angina pectoris attacks</li> <li>○ Decreases rate of cardiovascular mortality &amp; hospitalization in pt's with heart failure</li> </ul>	<b>Bind to opiate receptors in the CNS. Alter the perception of and response to painful stimuli while producing generalized CNS depression</b> <ul style="list-style-type: none"> <li>○ Decrease in severity of moderate pain</li> <li>○ Suppression of cough reflex</li> <li>○ Analgesia</li> <li>○ Antipyresis</li> </ul>	<b>Essential for nervous, muscular, and skeletal systems.</b> <ul style="list-style-type: none"> <li>○ Maintains cell membrane and capillary permeability.</li> <li>○ Acts as an activator in the transmission of nerve impulses and contraction of cardiac, skeletal, and smooth muscle.</li> <li>○ Essential for bone formation and blood coagulation</li> </ul>
<b>Reason Client Taking</b>	<b>HTN</b>	<b>Hip pain</b>	<b>Osteoporosis</b>

<b>Contraindications (2)</b>	<ul style="list-style-type: none"> <li>• Uncompensated HF</li> <li>• Pulmonary edema</li> <li>• Cardiogenic shock</li> <li>• Bradycardia, heart block, or sick sinus syndrome (in absence of pacemaker)</li> </ul>	<ul style="list-style-type: none"> <li>• Significant respiratory depression</li> <li>• Paralytic ileus</li> </ul>	<ul style="list-style-type: none"> <li>• Hyperglycemia</li> <li>• Renal calculi</li> </ul>
<b>Side Effects/Adverse Reactions (2)</b>	<ul style="list-style-type: none"> <li>• Fatigue</li> <li>• Bradycardia</li> </ul>	<ul style="list-style-type: none"> <li>• Headache</li> <li>• Hypotension</li> </ul>	<ul style="list-style-type: none"> <li>• Headache</li> <li>• Arrhythmias</li> </ul>

<b>Brand/Generic</b>	<b>Colace capsule (Docusate)</b>	<b>Vitamin D tab</b>
<b>Dose</b>	<b>100 mg</b>	<b>1.25 mg</b>
<b>Frequency</b>	<b>Once every morning</b>	<b>Every Friday morning</b>
<b>Route</b>	<b>Oral</b>	<b>Oral</b>
<b>Classification</b>	<b>Ther. Class: Laxatives Pharm. Class: Stool softener</b>	<b>Ther. Class: Vitamins Pharm. Class: Fat soluble vitamins</b>
<b>Mechanism of Action</b>	<p>Promotes incorporation of water into stool, resulting in softer fecal mass. May also promote electrolyte and water secretion into the colon.</p> <ul style="list-style-type: none"> <li>• Softening stool and passage of stool</li> </ul>	<p>Requires activation in the liver and the kidneys to create the active form of vitamin D2.</p> <ul style="list-style-type: none"> <li>○ Promotes the absorption of calcium and decreases parathyroid hormone concentrations</li> <li>○ Treatment and prevention of deficiency</li> <li>○ Improved calcium and phosphorous homeostasis</li> </ul>
<b>Reason Client Taking</b>	<b>Constipation</b>	<b>Vitamin D deficiency</b>

<b>Contraindications (2)</b>	<ul style="list-style-type: none"> <li>• <b>Hypersensitivity</b></li> <li>• <b>Abdominal pain, nausea, or vomiting, especially when associated with fever or other signs of an acute abdomen</b></li> </ul>	<ul style="list-style-type: none"> <li>• <b>Hypersensitivity</b></li> <li>• <b>Hypercalcemia</b></li> </ul>
<b>Side Effects/Adverse Reactions (2)</b>	<ul style="list-style-type: none"> <li>• <b>Throat irritation</b></li> <li>• <b>Mild cramps and diarrhea</b></li> </ul>	<ul style="list-style-type: none"> <li>• <b>Dizziness</b></li> <li>• <b>Headache</b></li> </ul>
