

N431 Adult Health II

Clinical Reflection Form

Name: Happy Kalavadia  
10/14/2021

Date:

Clinical Rotation Site: Carle Hospital, Urbana

1. Briefly write about today's experience(s):

My experiences in CCU unit was full of extraordinary learning experiencing and tips from my nurse Kamica which helped me to understand that why things happen. She allowed me to administer a lot of IV and tube feeding medications which I did it successfully. She was a travel nurse, but she had eight years nursing experience . I saw a patient who had anoxic brain injury due to seizures and her brain could not function without external ventilator. This was heart breaking and she was a young female who had three-year-old son . I had an opportunity to talk with her physician and she explained the pathophysiology of anoxic brain injury and its treatment protocol.

2. What is one thing you learned?

I learned that how to administer continuous insulin via the pump because the patient had DKA.

3. What is one thing you would do differently?

I would want more time in CCU but other than that there is nothing that I would do differently.

4. What is your major "take home" from today's clinical experience(s)?

I learned how to do multitasking, time management and provide good quality care to the critical ill patients.

5. Is there anything else you would like to mention?

Yes, I would like to sincerely thank my clinical instructor Professor Unrein, who provided me with such an opportunity so that I could be in CCU and learn from my nurse as well as patients.
