

N431 Adult Health II

Clinical Reflection Form

Name: Conor Deering

Date: November 3, 2021

Clinical Rotation Site: Wound care clinic

1. Briefly write about today's experience(s)

Today I learned about how wounds are cared for in a hospital setting.

2. What is one thing you learned?

I learned that some wounds need to be debrided before they can heal properly.

3. What is one thing you would do differently?

I would ask more questions and take more time to think about what I want to ask.

4. What is your major "take home" from today's clinical experience(s)?

Wound care is done in an outpatient setting and is usually a 10hr x 4 days a week for nurses. The patients are usually in and out in about 30 minutes.

5. Is there anything else you would like to mention?

Wound care has a lot of continuity so the same patient may come in repeatedly for years.
