

N432 Final Study Guide

Remember to go back and review all of your study guides and practice exams. Don't forget the Kahoots that went out for the units as well. These will help you prepare. There will be no pictures on this exam and no physical strips. You will still need to know the characteristics of fetal heart rate variations and newborn characteristics. This is not an inclusive list but meant to help focus topics.

Unit 1:

Contraception

Sexually Transmitted Infections and Treatments

Prenatal nutrition (vitamin and mineral requirements)

Psychologic and physiologic adaptations of pregnancy

Common discomforts by trimester

Nagel's rule

Group beta strep

Biophysical profile

Rhogam

Unit 2:

Definition of labor

Stages of labor

Leopold's Maneuvers

Fetal station

Labor assessments

Fetal heart rate monitoring

Immediate post-partum assessments

Medication used in labor

Unit 3:

Bleeding in pregnancy

Preterm labor care

Gestational diabetes care

Hypertension and pre-eclampsia

Medications used to treat the above disorders

Post-partum hemorrhage
