

N321 Adult Health I

Clinical Reflection Form

Name: Destiny Bell

Date: 12/14/2021

End of clinical Journal

1. Briefly write about your experience(s)

I learned a lot during this clinical experience. I feel that many of the nurses were eager to see us succeed and help us during our clinical. It also was nice to have a clinical instructor who made us students feel comfortable and was there to help us with any questions and concerns we had.

2. What are things you learned?

Some things that I learned during clinical is how to set medication to infuse on an IV pump. Another thing I learned this semester in clinical was how to do tracheotomy care and got to help the nurse suction a trach. Lastly, I was able to learn the process of how to properly scan and administer medications.

3. What are things you would do differently?

Some things that i would do differently is to not be so nervous and to ask more questions.

4. What is your major “take home” from clinical experience(s)?

My major take home from this clinical is to never be afraid to ask your clinical and nurses in clinical questions, they are all rooting for you to succeed.

5. Is there anything else you would like to mention?

Amy was an amazing clinical instructor. She was readily available to us at any time if we had questions either during clinical or outside of clinical when it came to our care plans or assignments. It was nice to have someone who truly cared about us students and showed that in how she helped us in clinical experience and checked in on us.
