

N321 Adult Health I

Clinical Reflection Form

Name: Riley Doran

Date: 3-1-22

Journal

1. Briefly write about your experience(s)

During clinicals I was able to experience the radiology department. At first I thought my day would simply be taking x-rays but I soon learned it was a lot more than that. As I shadowed the nurse I was able to see a paracentesis, PICC line placement and a kidney biopsy that required the use of a CT scan for placement of the needle. The nurse oversaw properly medicating the patient and ensuring their safety throughout the procedure.

2. What are things you learned?

I learned that there is much more to radiology nursing than just doing x rays.

3. What are things you would do differently?

I would not do anything differently.

4. What is your major “take home” from clinical experience(s)?

My major take home from this rotation was that this could be a potential career pathway for me.

5. Is there anything else you would like to mention?

I thought it was interesting that one of the nurses was pregnant and still working in the department. She used the PPE and x-ray gowns as required but I still found it interesting.
