1. How does the clinical site relate to Population/Global Health?

This clinical site relates to Population/Global Health because it offers services and support for survivors of sexual violence. The Survivor resource center serves anyone who has been a victim of sexual assault in Vermilion, Edgar, and Clark Counties in Illinois.

2. How were you an engaged nursing professional today?

This student was an engaged nursing professional today by interacting with the staff and offering services that would help benefit the resource center. The student also asked many questions to the staff regarding what the resource center offers and asked for ways to help contribute that would help benefit the community.

3. How did you contribute to the service of the community today?

This student helped contribute to the service of the community today by helping create support bags that include resources that would benefit the individual during hospitalization, such as toothbrushes, shampoo and conditioner, toothpaste, and body wash. The students also helped create workbooks for high school students that included helpful information about the survivor resource center. Lastly, the student assisted with assembling folders with paperwork given to each individual seeking help.

4. Name 3 ways this clinical site impacts the community today?

The survivor resource center provides many resources that positively impact community health. They provide counseling and legal and medical advocacy for all survivors of sexual violence. These various resources can impact an individual's life. The survivor resource center also employs case managers that help meet the needs of survivors outside of regular counseling. They also assist with food needs, changing locks, and getting started with education which is very impactful for victims.

5. Name 1 way this site could better serve the community and why?

This clinical site can serve the community better by serving more communities besides Vermilion, Edgar, and Clark counties.

6. What health risks are experienced by the population served by today's clinical site?

Many survivors of sexual violence can develop health conditions such as PTSD, depression, sexually transmitted infections, and unwanted pregnancy.

7. Did this project change you or your thinking and how it changed you?

This project changed the student's thinking about healing after sexual assault. The student was surprised by the various resources available for victims, such as the ER resource pouches and the survivor folders. The workers were amiable and non-judgemental. Overall, this project opened the student's eyes to how many resources are available to victims of sexual assault, free of cost.
