

N431 Adult Health II

Clinical Reflection Form

Name: Camryn Studer

Date: 4/3/23

Clinical Rotation Site: Emergency department

1. Briefly write about today's experience(s)

I pushed a multitude of medications via IV, started an IV, drew blood, and assisted in other things while in the emergency room.

2. What is one thing you learned?

I learned that the migraine cocktail needs to be pushed slowly because it may cause feelings of panic and hopelessness. I also learned how to "fix" an IV if the needle is too deep or not in the right spot.

3. What is one thing you would do differently?

I would try and be more confident in my skills like pushing medications and inserting IVs.

4. What is your major "take home" from today's clinical experience(s)?

My major take home is that I really enjoyed the emergency department and how fast paced it is. I think either the ER is somewhere that I would enjoy working one day.

5. Is there anything else you would like to mention?

I had a great experience.
