Clinical Reflection Form 2

Name: Shana Stanley

Date: 4/24/2023

Clinical Rotation Site: CT8

1. Briefly write about today's experience(s)

Today I had a patient with CHF. Upon arriving on the floor, I was informed by my nurse that there was a good chance that we were going to call a rapid response on the patient due to his O2 saturation. Fortunately, this did not happen and we were able to work with RT and bring those levels back up via CPAP.

2. What is one thing you learned?

Carle has a new thing they are trying in which the doctors come around and do a kind of rounding on each patient with the nurse. This is during the morning med pass and seems a little crazy to me. We had to continually stop patient care in order to accommodate the doctor's rounding schedules.

3. What is one thing you would do differently?

I would have liked to be able to see my patient or get a report before his de-stat. I had no baseline for his condition and kind of just walked into a little mess.

4. What is your major "take home" from today's clinical experience(s)?

I think my biggest take-home is compassion for my patients. I didn't know that while giving my education that I was easing my patient's worries.

5. Is there anything else you would like to mention?
Not really!
