

N431 Adult Health II

Clinical Reflection Form

Name: Brayden Percival

Date: 09/25/2023

Clinical Rotation Site: RAD

1. Briefly write about today's experience(s)

Today I observed an MRI scan on a patient with a Pacemaker. The RAD nurse supervised and charted vitals on the patient every 5 minutes as the scan was being performed. After the scan was complete, the nurse reprogrammed the pacemaker back to original settings.

2. What is one thing you learned?

I learned about a Medtronic remote monitoring device used during the procedure. It allowed the provider and the nurse to see how the implanted heart device (pacemaker) was behaving.

3. What is one thing you would do differently?

I would not do anything differently, I mainly observed and made MRI prep packs.

4. What is your major "take home" from today's clinical experience(s)?

I was my first time in radiology and I need to be more self aware around radioactive equipment. I almost walked into the room with my metal watch on.

5. Is there anything else you would like to mention?
