<u>APA Format</u> • Appropriate APA in-text citations and listed all appropriate references in APA format • At least 2 scholarly source(s) are utilized and should be 5 or less years old • Source(s) greater than 5 years old will not be accepted • Reference page complete	No in-text citations present 2 or more references are greater than 5 years old 3 or more APA errors No reference page present	1-2 APA errors 1 reference is greater than 5 years old In-text citations appropriately cited Reference page present	No APA errors present In-text citations appropriately cited Reference page present and formatted properly	
TOTAL				/25

Our client is a 45-year-old female who is **newly diagnosed with hypertension**. The provider has ordered a **heart healthy diet**. The client needs education on what foods they should eat and what they should avoid. **The client's favorite food is eggs and bacon**. She eats this every morning for breakfast.

Assessment of Client/Family (5 points)	Nursing Diagnosis & Goal of Teaching (5 points)	Interventions (5 points)	Methods/Teaching Tools (2 points)	Evaluation (3 points)
Level of motivation for learning: The client wants to learn but hesitates to change what she eats every morning for breakfast. Barriers to effective learning: There is a minor language barrier, with English being the client's second language. Health beliefs/values: The client wants to be healthy and get her hypertension under control, but she doesn't understand how the food she eats can affect her blood pressure. Psychosocial development: The client is more focused on her family and children's well-being and doesn't take the time to care for herself. Cognitive development: Appropriate for their age. The client is a college graduate.	Nursing Diagnosis: Deficient knowledge related to inadequate information on hypertension and a heart-healthy diet (Phelps, 2022). Goal of Teaching: The client will be able to distinguish which foods are good or bad for her hypertension and state an understanding of how to take her blood pressure at home.	Intervention 1: Provide written materials explaining the foods included in a heart-healthy diet and the dangers of uncontrolled blood pressure (Phelps, 2022). Intervention 2: Integrate the client's preferences into the teaching plan Inform the client she may keep eggs in her new diet since they have been proven to not affect hypertension (Kolahdouz-Mohammadi, 2020). However, she needs to find an alternative to bacon. Intervention 3: Arrange an interpreter for the client if necessary.	Method 1: Use brochures (in Spanish) about what foods are good for a heart-healthy diet and the dangers of uncontrolled hypertension. Method 2: Demonstrate to the client how to check blood pressure.	Discuss how the client/family received the teaching: The client stated an understanding of everything that was taught and is motivated to make the changes; however, she is a little disappointed in having to modify her favorite foods. Identify strengths/weaknesses of the client or family in receiving teaching: The client was open to learning about how foods affect her blood pressure and stated that her family would be willing to help her make the necessary changes. Suggest modifications to improve the teaching plan (what would have improved the plan?): In this scenario, we focused too much on foods the client should eat but not enough on what they should watch out for and avoid. The nurse should have

				included foods related to the client's cultural background and considered their cultural habits.
