

N431 Adult Health II

Clinical Reflection Form

Name: Ragin Baker

Date: 2/26/24

Clinical Rotation Site: CCU

1. Briefly write about today's experience(s)

In the CCU there was not much going on. We got a patient from the PACU who had a craniotomy and then a patient who was intubated and has end stage CHF. The craniotomy patient was going good no complications and mild pain. The intubated patient started to have a high heart rate towards the end of clinical and we were trying to fix that. I also got to look at the craniotomy patient's brain scans.

2. What is one thing you learned?

I learned that a craniotomy is where they put the skull back and a craniectomy is where they leave the piece of the skull out.

3. What is one thing you would do differently?

There is nothing I really would have done differently, may ask more questions.

4. What is your major "take home" from today's clinical experience(s)?

The nurse taking time to make me feel included and teaching/explaining things to me.

5. Is there anything else you would like to mention?

There is nothing else that I would like to mention.
