

Pg 292

1. 60 mcg/mL
2. 100 mL/hour
3. 8 mcg/mL
4. 4 mL/hour
5. 1080 units/hour
6. 22 mL/hour; 6 hours
7. 1000 mg
8. 27 mL/hour

Pg 293

1. Since the patient has renal failure some of the dosages may need to be changed.
2. Because all patients have different reactions to different medications. These specific vasopressors have different mechanisms of action, which work best for this client.
3. Diprivan will sedate the patient.
4. Calcium channel blockers, but the patient is allergic.
5. The medications' effect on the alpha and beta receptors
6. To make the medication infuse over a longer period of time, which could prevent nausea with this specific medication.
