Suicide Risk Screening Tool Reflection

Noticing

I chose this additional assessment because the client was admitted for jumping out of a 3-story building. I noticed that the client remained shy and slightly anxious.

Interpreting

The client seemed more guarded with this assessment. I feel like she had a very bad upbringing and therefore is not very talkative about her situation.

Responding

I used therapeutic communication to try and help with her healing process. I was gentle with the client. She seemed fragile and I did not want to poke and prod too much.

Reflecting

I think it is harder dealing with kids in this type of situation. Kids should not have these problems that might have been caused by adults abusing them.
