

N431 Adult Health II

Clinical Reflection Form

Name: Presley King

Date:4-8-2024

Clinical Rotation Site: CCU

1. Briefly write about today's experience(s)

I got there and met my nurse. We gave both of my patients their morning medications. We went over the breathing machine and Ct scans and MRI. I helped the patient get to the bedside commode and cleaned her up.

2. What is one thing you learned?

I learned that different lobes of the brain are affected by brains bleeds and knowing what each lobe does is important. I know that right versus left side strokes, but learning the different lobes are just as important.

3. What is one thing you would do differently?

I would spend more time with my patient. We were so busy that we could not get that much one on one time.

4. What is your major "take home" from today's clinical experience(s)?

My major take home is to ask question. My nurse asked why the doctor would be changing orders when the orders that are in place are working. He told me to never stop asking question no matter how many years of experience you have.

5. Is there anything else you would like to mention? No
