

**Discuss how the client/ family received the teaching:** The client received the teaching well and she asked thorough questions about the teaching. The patient did not have any family while we were demonstrating the task.

**Identify strengths/ weaknesses of the client or family in receiving teaching:** The strength of the client were she was able to perform putting in the nasal cannula by herself and asking questions. Weakness: there were a few extra questions asked that had to be restated but other than that no other weaknesses.

**Suggest modifications to improve teaching plan (what would have improved the plan?):** I would have improved the plan by using the teach back method and I would have had the patient show me how to hook up the oxygen concentrator by herself after I had previously shown her the skill.
