

N431 Adult Health II

Clinical Reflection Form

Name: Miranda Sentelle

Date: 04/22/2024

Clinical Rotation Site: Carle CCU

1. Briefly write about today's experience(s)

During my clinic experiences, I got to do a neuro check on a patient who had a stroke and administer her medication of heparin. For our second patient, I got to give him an IV push of lisinopril because his blood pressure was higher than the doctors wanted it to be. I also got to experience an ultrasound IV being performed on a patient.

2. What is one thing you learned?

I learned that lisinopril can be treated to decrease hypertension but also treat a patient with tachycardia as well.

3. What is one thing you would do differently?

I don't think I would have done anything differently. I was engaged with my patients and my nurse.

4. What is your major "take home" from today's clinical experience(s)?

My major "take home" from today's clinical experience(s) is that when you have a patient in CCU, they're required to do a full neuro assignment every Q2 or Q4, depending on the patient's condition, to help recognize and manage other disorders early on.

5. Is there anything else you would like to mention?

There is nothing else I would like to mention.
