

Module Report

Simulation: Skills Modules 3.0

Module: Virtual Scenario: Blood transfusion

Individual Name: Erica Stevenson

Institution: Lakeview CON

Program Type: BSN

Time Use And Score

	Date	Time
Virtual Scenario: Blood transfusion	8/20/2024	15 min

Simulation		
Scenario	In this virtual simulation, you cared for Kathleen Larrimore, who was admitted to an acute care facility and required a blood transfusion due to a gastrointestinal bleed. The goal was to administer packed red blood cells following evidence-based practice standards and safety precautions, while monitoring the client's response and intervening as needed. Review your results below to determine how your performance aligned with the goals of the simulation.	
Overall Performance	Congratulations! You met the requirements to complete this virtual skills scenario.	Score: 97.5%
Essential Activities	Evidence-Based Practice You did not demonstrate a thorough understanding of implementing evidence-based practice related to administering a blood transfusion and responding to unexpected findings. Safety Factors and Infection Control Congratulations! You have demonstrated a thorough understanding of implementing safety and infection control interventions to optimize client outcomes.	
Pitfall Actions	Evidence-Based Practice <i>Major</i> - You selected one or more actions that caused harm or increased risk of negative outcome for the client. Therefore, further study of standards related to blood administration and problem-solving related to evidence-based practice should be reviewed prior to completing the scenario again. Spend time reviewing type and crossmatch procedures, blood type compatibility, pre-transfusion verifications, preparing equipment for transfusion, and manifestations and procedures related to transfusion reactions.
