

ATI: Video Case Study- Safety- Metered Dose Inhaler

**Challenge instructions**

What steps should the nurse include when reviewing the use of an MDI with a spacer with the child? What is the advantage of using a spacer with an MDI?

The nurse should use language that the child understands and go over each step of how to attach the spacer and let the child do it themselves in front of the nurse to make sure they did it right. The spacer makes sure that the medicine is distributed evenly and gives the child an equal amount of medication to inhale at one time.

**Reflection**

Take notes here to describe the strengths and weaknesses of your own submission based on your review of the expert answer.

I didn't mention that the child may find it difficult to use the MDI without the spacer, which allows the child to breathe slower and take in more medication with each use. The nurse should also review with the child how to take care of their inhaler and how to store it after each use.
