

# Module Report

Simulation: Skills Modules 3.0

Module: Virtual Scenario: Vital signs

Individual Name: **Bethany Waugh**

Institution: **Lakeview CON**

Program Type: **BSN**

## Time Use And Score

	Date	Time
<b>Virtual Scenario: Vital signs</b>	8/29/2024	39 min

## Simulation

### Scenario

In this virtual simulation, you cared for Alfred Casio, who was at the clinic for his annual checkup. Alfred has a history of hypertension and reported occasional dizziness when standing. The goal was to implement techniques for measuring vital signs, interpret vital sign results, and intervene based on vital sign findings and the client's needs. Review your results below to determine how your performance aligned with the goals of the simulation.

### Overall Performance

Congratulations! You met the requirements to complete this virtual skills scenario.

**Score:** 94.1%

### Essential Activities

#### Client-centered Care

Congratulations! You have demonstrated a thorough understanding of vital sign assessment and related nursing interventions needed to complete this virtual skills scenario in client-centered care.

#### Evidence-Based Practice

You did not demonstrate a thorough understanding of implementing evidence-based practice related to measuring vital signs and responding to unexpected findings.

#### Safety Factors and Infection Control

You did not demonstrate a thorough understanding of safety and infection control interventions to optimize client outcomes.

<b>Pitfall Actions</b>	<p><b>Evidence-Based Practice</b></p> <p><i>Minor</i> - You have selected one or more actions that were minimally helpful but not harmful in the care of the client and resolution of problems. These may be relevant evidence-based practice in other situations but were not helpful in this scenario. Spend time reviewing additional assessments to complete when a client has an irregular pulse rate, the anatomical location for auscultating an apical pulse, and interventions to improve pulse oximetry signal and waveform.</p> <hr/> <p><b>Safety Factors and Infection Control</b></p> <p><i>Major</i> - You selected one or more actions that caused harm or increased risk of negative outcome for the client. Therefore, further study of safety factors and infection control is needed prior to completing the scenario again. Spend time reviewing interventions for a temperature above the expected reference range, factors that can alter blood pressure results, additional assessments to complete when a client has an increased respiratory rate, and actions to take when a client reports dizziness upon standing.</p>
