

Clinical Experience Summary

This report will be a minimum of 2 pages in APA format. Each question needs to have a minimum of one paragraph response. In-text citations should be utilized. Use your textbook, the internet, and other scholarly resources to assist with in-text citations.

1. What is the priority nursing diagnosis for your patient? Why did you choose this diagnosis? **(5 points)**
Risk of anxiety related to the fear of the birthing process as evidenced by the patient stating she was nervous. I chose this nursing diagnosis because I thought that this was the highest priority. There were no complications during the c-section otherwise I would have listed a more serious diagnosis. The patient was nervous about having a c-section. The patient had another child a couple years ago, but this child was born vaginally. Therefore, the patient did not know what to expect which caused her to be nervous.
2. Identify 3 nursing interventions supporting the nursing diagnosis? Explain what these interventions are and why they should be completed. **(15 points)**
 - **Provide the patient with breathing techniques. This can help calm their nerves by taking their mind off the situation and focusing more on the technique of their breathing (Wagner, 2023).**
 - **Answer any questions or concerns that the patient may have in a calm and therapeutic manner. Make sure that the questions are under the nursing scope of practice before answering. The patient could be nervous because she does not know what is going to happen and if she will be safe. Talking to the patient and acknowledging their feelings can help calm them (Wagner, 2023).**

- **Have the doctor come communicate with the patient and her husband about the c-section. The doctor is able to talk about the process of the procedure, the risks, and benefits. This will help calm the patient's nerves and anxiety because they are able to talk to the physician who is performing the procedure.**
3. **What was the evaluation of each of the previously identified nursing interventions? (10 points)**
 - a. **Providing breathing techniques to the patient helped distract her and calm her breathing. The patient's heart rate was rising, and this helped bring it down.**
 - b. **Talking to the patient with therapeutic communication also helped with the patient's anxiety. This let her know that the nurses who were going to take care of her during and after surgery were supportive, calm, and able to be trusted.**
 - c. **Having the doctor answer the questions that the patient had was also positive with reducing the patient's anxiety. It allowed her even more insight to the procedure that was about to take place.**
 4. **Describe this patient culture and identify a minimum of 2 patient preferences relating to their culture. (10 points)**
 - a. **This patient can be placed under a mixed ethnicity household culture. The patient was Caucasian, while her husband was Latino. One preference is the Catholic religion. The patient told the nurse that her and her husband followed the Catholic religion. Another preference was Latino food. Hours after the patient's procedure, she ordered Latino food from the hospital cafeteria.**
 5. **Reflection of clinical experience. (5 points)**

- a. What was one thing that put you outside your comfort zone?
 - i. **Watching the c-section placed me outside my comfort zone. I was excited to see the procedure but was also nervous because I have never witnessed a major surgery before. However, my body handled it well.**
- b. In what way did you see coordination between the health care team to provide appropriate care to the patient?
 - i. **The coordination between the health care team during the c-section procedure was smooth. The team worked together to deliver the baby. Once the baby was out of the mother's body, the nurses took the baby to care for her while the doctor, CRNA, and other nurses helped care for the mother.**
