

N431 Adult Health II

Clinical Reflection Form

Name: Madalyn Goble

Date: 9/19/2024

Clinical Rotation Site: Radiology

1. Briefly write about today's experience(s)

I was able to shadow two different nurses in both the MRI suites and the Mills Breast Cancer Center. With my first nurse, I was able to help obtain vitals on a pediatric patient that was preparing to undergo a four-part MRI scan under anesthesia. I was able to follow my nurse into the area where the child was put under the anesthesia and could watch that process in its entirety. I was also able to watch the beginning stages of the MRI process and how the pictures are actually obtained. After this, I was walked to the South Clinic and the Mills Breast Cancer Center where I was able to observe two breast biopsies. These were very interesting, and I learned a lot.

2. What is one thing you learned?

One thing that I learned is that there are many different roles a nurse can play in the hospital setting. Before this rotation, I was unaware that radiology nursing was a thing, and it was interesting to see what was a part of this role.

3. What is one thing you would do differently?

One thing I would do differently is ask if there were opportunities to start IVs or work on other skills that we have been taught during the program.

4. What is your major "take home" from today's clinical experience(s)?

My biggest take home from my experience would be that there are so many different types of nursing jobs out there and everyone can find a specialty or unit that suits them best.

5. Is there anything else you would like to mention?

I really learned a lot from my time with Jasmine and think that she would be a great person for others to follow. She explained procedures in a way that was easy to understand and I really felt comfortable with her.
