

# Module Report

Simulation: Skills Modules 3.0

Module: Virtual Scenario: Pain assessment

Individual Name: Tashiya Warfield

Institution: Lakeview CON

Program Type: BSN

Time Use And Score		
	Date	Time
Virtual Scenario: Pain assessment	11/8/2023	49 min

Simulation	
<b>Scenario</b>	In this virtual simulation, you cared for Amy Jenkins who was admitted to an acute care facility to receive treatment for left flank pain. The goal was to perform a pain assessment and intervene based on the client's needs. Review your results below to determine how your performance aligned with the goals of the simulation.
<b>Overall Performance</b>	Congratulations! You met the requirements to complete this virtual skills scenario. <b>Score: 85.9%</b>
<b>Essential Activities</b>	<p><b>Client-centered Care</b></p> <p>You did not demonstrate a thorough understanding of pain assessment and related nursing interventions needed to complete this virtual skills scenario in client-centered care. Spend time reviewing interventions to promote client comfort.</p> <hr/> <p><b>Evidence-Based Practice</b></p> <p>You did not demonstrate a thorough understanding of evidence-based practice related to client pain.</p> <hr/> <p><b>Safety Factors and Infection Control</b></p> <p>You did not demonstrate a thorough understanding of safety and infection control interventions to optimize client outcomes.</p>

<b>Pitfall Actions</b>	<p><b>Client-centered Care</b></p> <p><i>Major</i> - You selected one or more actions that caused harm or increased risk of negative outcome for the client. Therefore, further study of non-pharmacological interventions or effects of adverse medications is needed prior to completing the scenario again. Spend time reviewing non-pharmacological interventions to reduce pain and promote comfort, and actions to take when evaluating a client who has received analgesia.</p>
	<p><b>Evidence-Based Practice</b></p> <p><i>Major</i> - You selected one or more actions that caused harm or increased risk of negative outcome for the client. Therefore, further study of evidence-based practice standards and guidelines for conducting a pain assessment is needed prior to completing the scenario again. Spend time reviewing how to assess pain characteristics, how to use a client's pain rating to guide analgesia selection, essential information needed prior to administering pain medication, and potential adverse effects of opioid medications.</p>
	<p><b>Safety Factors and Infection Control</b></p> <p><i>Major</i> - You selected one or more actions that caused harm or increased risk of negative outcome for the client. Therefore, further study of safety factors and infection control is needed prior to completing the scenario again. Spend time reviewing the onset of action of oral pain medications.</p>

<b>EHR Chart</b>	
<b>Instructor Review Status</b>	Not Reviewed
<b>Instructor Review</b>	This chart has not been reviewed by the instructor. This report will populate with additional information when the status has changed.
<b>Instructor Feedback</b>	<p>Instructor feedback can be viewed by accessing the link on the on-line version of this report.</p> <p>If your instructor has enabled the Expert EHR Chart, you may view the example in the attached page.</p>
