

- How does the clinical site relate to Population/Global Health?
  - The clinical site is related to the population/global health class as these resources are needed for the community and don't necessarily need the patient to go into the hospital to get treated. Specifically for the endocrine side of the clinic, these are for patients with a growth hormone issue such as low testosterone or other comorbidities. These medications are controlled substances and need to be administered in the proper place, even though exceptions have been made for patients who have family members who work in the medical field.
- How were you an engaged nursing professional today?
  - I was engaged by seeing the process that the nurses go through to approve medications for the pharmacy to refill, and also how the nurses can see specific data regarding a patient's continuous glucose monitor system. The information can be shared through the app with the Epic MyChart. Furthermore, there were phone calls that were exchanged between other medical groups and even to the pharmacy and patients.
- How did you contribute to the service of the community today?
  - I contributed by helping administer medications to also helping with taking the patient's vitals with the CMA's that were in the clinic.
- Name 3 ways this clinical site impacts the community health?
  - Ways the clinical site impacts the community health in the area by assessing the health needs of patients with endocrine and metabolic health needs, planning and administering services that would otherwise cause the patient to go to the hospital, and lastly, promoting healthy lifestyle changes that would help promote the patient's health.
- Name 1 way this site could better serve the community and why?
  - The clinic could better serve the community by hiring more nurses that could go to other sites, as the site only had 4 nurses and at the time of being at the site there was only 1 present. Furthermore, possibly doing health screenings for the elementary schools, as there is children that are undiagnosed and parents might not even know.
- What health risks are experienced by the population served by today's clinical site?
  - Health risks that were experienced by the population of patients at the clinical site include possible bone loss, muscle loss, emotional changes, and mainly sexual dysfunction.
