

N431 Adult Health II

Clinical Reflection Form

Name: Jaidi Davis

Date: 10/14/2024

Clinical Rotation Site: 1st half of semester

1. Briefly write about today's experience(s)

The first half of the semester has been very eye opening for me. Seeing the pain clinic, which I didn't even know was a thing, was very interesting. Having all of the practice with IVs was very very helpful. Having a rotation at the cancer center was also interesting to me. I did not think it was one big room with a bunch of recliners and multiple patients in there at one time receiving chemo.

2. What is one thing you learned?

I learned that I am capable of starting IVs despite the lack of practice that we have had up to this point. I also learned how to access a port. I learned that when giving chemo drugs you have to gown and double glove.

3. What is one thing you would do differently?

I would be more up front with asking the nurses if I can perform tasks. Sometimes they seem in such a big hurry, and I feel like I would burden them by asking if I can do something because they can get it done 10x faster than me.

4. What is your major "take home" from today's clinical experience(s)?

Be confident in your skills and do not be scared to try something that you have never done on a "real" person.

5. Is there anything else you would like to mention?
