

- How does the clinical site relate to Population/Global Health?
  - This cover over any disaster and how to separate certain injuries from the people that we can save versus who we can't save through the incident. Also understanding what resources are available and what is the evacuation plan if things go south
- How were you an engaged nursing professional today?
  - Triageing patients and helping with nursing tasks to save as many people as possible, and also seeing who needs immediate transport out incase of an evacuation is needed.
- How did you contribute to the service of the community today?
  - Helped with specific nursing tasks such as leading the team and letting them know what things are necessary to do. Also helped labeling patients to see who we can help/save versus who is not going to survive the incident
- Name 3 ways this clinical site impacts the community health?
  - Three ways the site impacts community health is understanding how to respond to a disaster, also knowing how to triage patients by their separate injuries and who to get out accordingly. Lastly, understanding that not everyone will be able to survive the incident.
- Name 1 way this site could better serve the community and why?
  - This site could better serve the community by experiencing patients through a tragedy. Since this was based on administration and understanding who can leave and who would have to stay.
- What health risks are experienced by the population served by today's clinical site?
  - Health risks that are experienced by the population are by saving lives through the disaster. Knowing how to save lives of survivable injuries vs patients that could not survive the disaster.
