

Clinical Experience Summary- Newborn

This report will be a minimum of 2 pages in APA format. Each question needs to have a minimum of one paragraph response. In-text citations should be utilized. Use your textbook, the internet, and other scholarly resources to assist with in-text citations.

1. **What is the priority nursing diagnosis for your patient? Why did you choose this diagnosis? (5 points)**
 - a. Risk for injury related to caregiver knowledge deficit.
 - i. I chose this diagnosis because the one family seemed like they cared for themselves more than for the care of their newborn, even after being educated.
2. **Identify 3 nursing interventions supporting the nursing diagnosis? Explain what these interventions are and why they should be completed. (15 points)**
 - a. Educate the parents on safe practices (American Academy of Pediatrics, 2022).
 - i. This should be completed because it's regarding the safety of the infant. Despite the mother doing the same thing prior to children, it's important to stress the safety practice when caring for the infant.
 - b. Promote proper infant handling (Smith et al., 2019).
 - i. When the mother was feeding the baby, she was at an angle, where the baby could easily choke. However, the father was handling the baby properly. They also stated that they did not know how to properly swaddle. Not swaddling the baby properly can cause complications like poor blood flow to the extremities.
 - c. Monitor and assess environmental safety (Johnson & Brown, 2020).
 - i. While they are in the hospital, they keep on monitoring the safety of the infant and intervene when the environment is unsafe. I believe that DCSF was going to be involved to make sure when they go home, the home is a safe environment for the baby.
3. **What was the evaluation of each of the previously identified nursing interventions? (10 points)**

I personally feel like the interventions were ignored because they still had the baby on the bed by themselves. The mother stated that she had done it with her other children, and they did it just fine. For a successful evaluation is where the parents listened to the safety education and practiced the safety handling.
4. **Describe this patient culture and identify a minimum of 2 patient preferences relating to their culture. (10 points)**
 - a. This patient family did not practice a culture. If they did, I would say they would practice the middle eastern culture, because the mother was doing skin-to-skin contact and breastfeeding.
5. **Reflection of clinical experience. (5 points)**

a. What was one thing that put you outside your comfort zone?

- i. One thing that pushed me out of my comfort zone, was how this one family wanted to go home but leaving their baby at the hospital. If it was me, I would never want to leave the hospital without my baby unless I had to. The parents seemed like they didn't care about the baby because they had been educated on fall prevention, but they did not listen. The baby was lying in bed where she could have felt off. It was sad to see.

b. In what way did you see coordination between the health care team to provide appropriate care to the patient?

- i. The coordination between the health care was the safety of the baby because she did not poop for the first 24 hours of being born. The provider was waiting until 48 hours after being born to see if she poops and if it hadn't, then they would have to get pediatric specialty involved to run tests to see why the baby is not passing the stool.
