

Clinical Experience Summary

This report will be a minimum of 2 pages in APA format. Each question needs to have a minimum of one paragraph response. In-text citations should be utilized. Use your textbook, the internet, and other scholarly resources to assist with in-text citations.

1. What is the priority nursing diagnosis for your patient? Why did you choose this diagnosis? **(5 points)**

The priority nursing diagnosis for my patient would be risk of infection related to impaired skin integrity as evidenced by warmth, swelling, redness, or drainage at the incision site. I have chosen this diagnosis because my patient received a cesarean section, which is a major abdominal surgery, and an infection that begins in a cesarean section can cause damage in several ways. One way that an infection of a cesarean section scar can cause damage is by triggering delayed healing and wound dehiscence; both of these complications lead to longer healing times, additional hospitalizations, increased pain, and more surgeries to cleanse and reapproximate the wound. Another way that an infection of a cesarean section scar can cause harm to the patient is by spreading to other organs in the body; incisional infections can spread into the blood stream and other organs in the body. This spreading of the infection can lead to organ damage, necrotizing fasciitis, and sepsis.

2. Identify 3 nursing interventions supporting the nursing diagnosis? Explain what these interventions are and why they should be completed. **(15 points)**

Appropriate wound care – this includes cleansing the incision site with an antiseptic solution (chlorhexidine or betadine) to remove microbes prior to surgery, and cleansing the incision site and performing dressing changes as ordered post operatively.

Strict aseptic technique – strict aseptic technique will prevent foreign microbes from entering the incision site and significantly lower the risks of the patient developing an infection.

Patient education – every patient who receives a cesarean section must be educated on how to effectively spot the signs of infection and when to call a doctor.

3. What was the evaluation of each of the previously identified nursing interventions? **(10 points)**
4. Describe this patient culture and identify a minimum of 2 patient preferences relating to their culture. **(10 points)**
My patient and their partner were both from Mexico.
5. Reflection of clinical experience. **(5 points)**
 - a. What was one thing that put you outside your comfort zone?
 - b. In what way did you see coordination between the health care team to provide appropriate care to the patient?
