### Emergency Department Experience

Last week I had a great day at clinical. I enjoyed the emergency department and all of the staff. The staff was amicable and helpful. The start of clinical the nurses gave us a little tour of the emergency department of where they kept certain things and where their triage room is. My classmate and I both got to start IV's, which unfortunately I couldn't get the IV in on my patient. We also got to administer potassium, which was interesting because it lined up with what we had learned in class. Then, we had a baby come in and an older lady. It was a busy place to be this afternoon. We saw a younger mom who came in and my classmate got to straight catheter her, which was interesting to see. Overall, I had an outstanding learning experience in the emergency department and loved how helpful the staff is. I cannot wait to go back to the emergency department for clinical.
