Module Report

Tutorial: The Leader

Module: Case 4

Individual Name: **Penny Galloway**

Institution: **Lakeview CON**

Program Type: **BSN**

Time Use and Score

	Date/Time	Time	Score
Case 4	4/4/2020 1:34:20 AM	13 min	100%

Results by Stage		
Stage 1	**(3 of 3 Correct)**	
Question 1		
Selected Option/ Result	"Quality improvement measures the degree to which an agency has met a criterion."	**Result:** Correct
Rationale	Quality improvement promotes quality care and focuses on prevention. Quality assurance measures the degree to which an agency has met a criterion.	
Question 2		
Selected Option/ Result	establish criteria for quality care.	**Result:** Correct
Rationale	The audit process is a tool that measures the quality of care. There must be criteria and clearly established standards against which to measure the data. This step must come next as all planning and implementation will depend on the level of deviation from the standard.	
Question 3		
Selected Option/ Result	The nurse-client ratio at the time of the fall.	**Result:** Correct
Rationale	A structure evaluation includes environmental factors such as staffing patterns.	
Stage 2	**(3 of 3 Correct)**	
Question 1		

Selected Option/ Result	Primary cesarean birth rates	Result: Correct
Rationale	Primary cesarean birth rates are not influenced by the quality of nursing care. Therefore, this is not a nursing-sensitive quality outcome.	
Question 2		
Selected Option/ Result	Magnet health care organizations must collect data about nursing sensitive outcomes.	Result: Correct
Rationale	The Magnet Recognition Program promotes leadership in nursing practice; therefore, these organizations must collect data about nursing sensitive outcomes and compare them to established professional nursing standards. Additionally, organizations that hold Magnet status must report outcomes that fall below the threshold established by the Magnet organization.	
Question 3		
Selected Option/ Result	Type and number of medications prescribed for the client	Result: Correct
Rationale	Prescription medications are iatrogenic risk factors, which are related to the treatment regimen.	
Stage 3	(2 of 2 Correct)	
Question 1		
Selected Option/ Result	Fourth quarter	Result: Correct
Rationale	The fall rate in the fourth quarter was 8.7 per 1,000 client days. This rate is the highest during the last fiscal year.	
Question 2		
Selected Option/ Result	The number of client falls per 1,000 client days.	Result: Correct
Rationale	Using the number of falls per 1,000 client days eliminates the influence of variation in client census. It can be calculated using the following formula: number of client falls / (number of client days x 1,000).	
Stage 4	(2 of 2 Correct)	
Question 1		
Selected Option/ Result	Root cause analysis is a way to determine the origin of a problem.	Result: Correct
Rationale	Root cause analysis is a tool which nurses can use to analyze an adverse event to determine its cause.	

REP_NTIndv_ModuleReport_1_0

Question 2	
Selected Option/ Result	Examine the circumstances related to each fall. **Result:** Correct
Rationale	Data collection is the first step of the route cause analysis process. Therefore, this is the first action the team should take.
