Daily Summary

This week, I did the Nurse Think modules again. I had John Duncan and Estelle Hatcher as my patients. It was a good refresher to assign nursing diagnoses and acuity assignments to these patients. One of the patients was post-op from an appendectomy, and was having acute pain. I had to do a lot of teaching with her on how to handle the pain and how to take care of herself upon discharge. Next, I did the dosage calculation problems. This was good practice for dosage calculations, as I had to pick the equipment needed to administer the medication, as well. This was also a good refresher. I had to determine needle and syringe sizes. I often get confused with needle sizes for IM and SubQ injections, so it is always a good topic to practice on.

I also did the medication pass assignment. It was similar to the one last week, as I had 5 patients and I had to pass their medications for the entire day, from 0900 to 2100. This was also a good refresher. I got done with it a little faster this week than I did last week, as I knew what to expect and what I needed to look for. I checked the patient's pain, vital signs, and lab values before administering any medications. This simulation also has scenarios that pop up as you are passing medications, and require you to choose who should go help that patient. Options include a CNA, LPN, or another RN. Delegation is something that is hit hard in Leadership and Management class, so that was also a nice refresher when it came to deciding who to delegate these tasks to. Overall, I think it was a good assignment

that helped me integrate lessons from several different classes that I have had.

While it was not the same as an in-person clinical, it was a good alternative.
