Factors that are contributing to the emotional atmosphere:

Typical clients who use this service:

Age: (average and range)

Gender:

Cultures:

Socioeconomic status:

Education level:

Reading ability:

Everyone was able to read out loud from paper given

Communication ability:

Everyone was sharing and communicating with the leader

Reasons for using

this agency/service?

To get a real experience and understanding of the nursing methods between mental health and ED

What could a nurse do to improve the milieu today on this unit? (Use extra pages if necessary)

I think they should create more options. Make it more structured like the real world because I think it's important because that's where they are going back into.

What needs are being focused on by the staff? (Physical, vocational, social, spiritual, emotional, etc.)

As stated above, I think the staff could be more involved with the clients. Make it more social, rather than interacting when they need to. Staff could provide multiple options throughout the day, that could facilitate the clients feeling like they are making decisions in their care there.

Honor Code: "I have neither given nor receive, nor will I tolerate others' use of unauthorized aid".
