

## OCCUPATIONAL CHOICE

The profession is an important part of human life and one of the important elections I have made. The profession, which is an important tool in the quality of life of the human being and in making the money necessary for it, has a very important role in determining the social dignity of the human being and even in his happiness. For this, the choice of profession plays a critical role in the life of the individual. The individual's choice of profession not only concerns the individual, but also concerns society and family. The school, which is one of the most important tools to achieve this goal, has a great responsibility and duty.

The profession is defined as an activity that a man does constantly to earn a living; that requires knowledge, training or creative power. Having a profession is very important for all individuals with a healthy development. As one of the most important sources of one's identity, the profession is an event space that allows one to be respected in society, to relate to others, to have a place in society and to experience the feeling that it works. For this reason, the choice of profession is a big step we have taken to create and shape our lives.

There are various opinions on the qualities that the profession should carry. It differs from person to person, the society in which it lives, the family structure. The most important is the effort spent on what is wanted to be achieved and the efforts made in this process.
