Research Thesis

Research Question: What is the impact of socialization on adolescent learning? Does gender make a difference?

Humans are social animals, so we know that for a variety of reasons we need to interact with other people. I choose this topic because during this age of the Covid 19 pandemic much of our adolescent our being robbed of the socialization of their secondary school years, but I wonder is this having a negative effect on their focus in school as well as their grades. I suspect that for adolescent socialization is quite important when it comes to learning. I suspect that boys will suffer more from a lack of socialization in education than boys since they are much more likely to seek our social situations.
