**Problem:**

The purpose of this study is to describe the effectiveness of an outcomes based career plan for Culinary Arts students to terms of their plan ownership and self-defined outcomes. If I were to implement an alternative plan in place of SMART goals, I would be able to resolve students' lack of academic accountability. The study will compare anew outcome-based model; GROW, the current goal sheet students' use, SMART. This research will follow two groups of Culinary Art students at the same time and should will presented as a manageable alternative that teachers can easily facilitate along with the Employment Specialist. The independent variable is the outcome-based plan and the dependent variable is the student's usage of the plan in school.

The questions addressed in this study are:

Will students understand and frequently use their outcome-based plan?

Will the students be able to form their own expected academic outcomes?

Will students be able to share their plan with others in their supportive network?
