1. According to Gigerenzer, why are gut feelings reliable? What gives them their efficacy? How and why do they work? He says humans depend on their gut instincts to survive. Because of intuition humans can make sense of each other and without these feelings we would all be lost. I believe Gigerenzer thinks the need to survive gives them their efficacy.
2. Why can human cognition not be described by logical rules of rationality? Human cognition can't be described by logical rules of rationality because human cognition is permeated by self-control. In a specific moment we all don't know how we will end up reacting because certain situations can affect us in different ways. At times our self-control isn't as strong as it can be and that is why human cognition can't be described by logical rules of rationality
