Raise the following fractions:

9) $\dfrac{2}{3} = \dfrac{12}{18}$

10) $\dfrac{5}{7} = \dfrac{25}{35}$

Reduce the following fractions: (All fractions must be reduced and proper.)

11) $\dfrac{6 \div 6}{18 \div 6} = \dfrac{1}{3}$

12) $\dfrac{14 \div 14}{28 \div 14} = \dfrac{1}{2}$

Add the following fractions: (All fractions must be reduced and proper.)

13) $\dfrac{5}{6} + \dfrac{1}{4} = \dfrac{13}{12}$

14) $6\dfrac{1}{5} + 2\dfrac{2}{5} = \dfrac{43}{5}$

Subtract the following fractions: (All fractions must be reduced and proper.)

15) $\dfrac{3}{4} - \dfrac{1}{4} = \dfrac{2 \div 2}{4 \div 2} = \dfrac{1}{2}$

16) $4\dfrac{11}{24} - 1\dfrac{1}{8} = \dfrac{165}{4}$

Multiply the following fractions: (All fractions must be reduced and proper.)

17) $2\dfrac{1}{3} \times \dfrac{5}{7} = \dfrac{5}{3}$

Divide the following fractions: (All fractions must be reduced and proper.)

18) $4\dfrac{1}{2} \div 2\dfrac{3}{12} = 2$
