Pick one of the commodities mentioned here (Or another one) - sugar , coffee, tobacco, cotton cloth , potatoes, muskets- and map the net- work of its travels. What new information does your map reveal about the workings of the global network.

Coffee beans are grown in countries such as Brazil, Colombia, Ethiopia, and Vietnam. The beans are harvested and processed by local communal farmers. The coffee beans are then exported to roasters and traders in countries such as the United States, Germany, and Japan. The roasters and traders blend and package the beans in order to distribute them to various coffee shops and grocery stores. As a result of this entire process, coffee is then purchased and consumed by consumers in various countries around the world. The map of the coffee network reveals that coffee is a highly globalized commodity, with beans grown in several countries and consumed by people all over the world. This process focuses on the compounded supply chain revolving around the distribution of coffee. A process that involves getting beans from the farm to the consumer, including processing, exporting, and importing. Additionally, it shows the importance of international trade in the coffee industry and the role of roasters and traders in shaping the final product for consumers.
